Nicolas Zilli

Lead Mobile Engineer · React Native & TypeScript · 10+ yrs ·
Relocating Geneva/Lausanne Q1 2027 · EU Citizen
Greater Lyon Area

Summary

Senior software engineer with 10+ years building mobile and web products across the full stack — from greenfield apps to production systems used daily in the field. My core expertise is React Native and TypeScript, but I operate at the system level: architecture decisions, CI/CD pipelines, design systems, store deployments, team onboarding. I've led mobile products end-to-end as the sole engineer, and scaled them by growing and mentoring the team around me. Recent work includes bootstrapping Tennaxia Déchets — a B2B EHS mobile app integrated with the French government's Trackdéchets platform — from zero to production in under a year, while introducing React and modern frontend practices to a backend-heavy team. Open to:- Staff or Lead Mobile Engineer roles in product companies- Founding engineer positions in early-stage startups - Freelance contracts (React Native, full-stack mobile/web) Currently Lyon, France · Relocating to the Geneva/Lausanne area Q1 2027 French citizen — EU national, permit B on contract signing, no visa complexity for Swiss employers

Experience

Tennaxia

Lead Mobile Engineer

December 2024 - Present (1 year 7 months)

Lyon

Joined as the sole mobile engineer to start Tennaxia's mobile team from scratch — hired to bootstrap Tennaxia Déchets, a B2B companion app for EHS field agents that digitizes waste tracing slips (BSD) and integrates with Trackdéchets, the French government's waste traceability platform (beta.gouv.fr). Shipped from zero to production in under a year. The mobile team has since grown to ~3.5 people.

Designed the full mobile architecture: React Native + Expo, offline capabilities via TanStack Query cache, Auth0 (co-led the company-wide migration),

custom design system built from scratch inspired by shadcn, monorepo structure to share UI across mobile and web
Sole engineer for the first phase, then onboarded and led 2 mid-junior devs + 1 senior for API ownership
Shipped to production: ~20 client companies, ~30 sites, ~30 field agents — currently in paid beta
Expanded scope to lead the webapp restyling: migrating highest-traffic screens from server-rendered Java to React SPA, within a Turborepo monorepo with shared components across the full EHS suite
Driving adoption of OpenAPI spec on the backend (no spec currently — pushing for it)

Stack: React Native, Expo, React, TypeScript, TanStack Query, Tailwind, Auth0, REST, Turborepo

C+NET

Lead Mobile Engineer

May 2022 - April 2026 (4 years)

Part of wedoproduct, a product studio I co-ran with a business associate. We won this contract, recruited a freelance developer, and I held full technical ownership of the Android field app throughout.

Built C+NET's waste management mobile product from scratch — a field app for agents handling waste collection, sorting, and processing. Delivered features continuously over 4 years, most recently adding guided onboarding tours for new agents.

- Built the Android app from scratch with offline capabilities (agents operate in low-connectivity environments)
- QR code scanning for real-time data exchange between agents and the platform
- MDM/EMM fleet management for deploying and maintaining company-owned devices in the field

Stack: React Native, Expo, TypeScript, GraphQL

CVDesignR

Mobile Engineer

January 2024 - May 2024 (5 months)

Part of wedoproduct, a product studio I co-ran with a business associate.

5-month engagement to build TalentPicker — a recruiter-facing mobile app for CVDesignR's CV bank platform, letting recruiters search, shortlist, and contact candidates.

- Built the full app from scratch: auth flow, webview navigation, push notifications and deep links via Brevo
- Set up CI/CD pipelines with OTA updates and automated App Store and Google Play submissions
- Delivered end-to-end: from scoping and quotation to production release

Stack: React Native, Expo, TypeScript

Hivebrite

Senior Mobile Engineer

June 2020 - July 2023 (3 years 2 months)

Part of wedoproduct, a product studio I co-ran with a business associate.

Hivebrite brought us in to build a real-time chat module for their community SaaS platform — then expanded the engagement to redesign and industrialize their entire white-label mobile app factory, serving alumni networks and nonprofits globally.

- Built a real-time chat module in React Native (mobile + web) with Sendbird integration
- Developed a Go-based push notification service for messaging, deployed on Kubernetes
- Designed and built an App Factory: internal tooling to automate the generation, customization, and store submission of white-label apps for Hivebrite's clients
- Managed the commercial structure: fixed-price phase 1, then per-day rate for the notification service
- Worked in SCRUM: daily standups, 2-week sprints

Stack: React Native, TypeScript, Go, Redis, Docker, Kubernetes, Sendbird, GitHub Actions

WELO, le syndic innovant

Mobile Engineer

October 2021 - June 2023 (1 year 9 months)

Part of wedoproduct, a product studio I co-ran with a business associate.

Built a full property management solution for WELO, a new-generation syndicator — a back office for agents and a cross-platform app for property owners.

- Multi-platform app (iOS, Android, Web) built with React Native + Expo
- Push notifications, file and photo upload, owner-facing document management
- Managed a junior freelance developer we brought onto the project

Stack: React Native, Expo, TypeScript

Splash Toys

Full Stack Engineer

December 2020 - December 2020 (1 month)

Part of wedoproduct, a product studio I co-ran with a business associate.

Short advisory engagement during the COVID lockdown period — helped Splash Toys launch a direct-to-consumer e-commerce channel in a tight timeframe.

- Configured and deployed a Shopify store
- Developed a custom theme with our designer
- Handled SEO and product referencing

Stack: Shopify, JavaScript

Mobi2Go

Senior Frontend Engineer

June 2019 - March 2020 (10 months)

Wellington, New Zealand

Joined Mobi2Go on a working holiday visa in Wellington, NZ — a SaaS company providing online ordering and POS terminals to restaurant chains. Worked in a small engineering team (2 frontend / 5 total).

- Led the migration from legacy frontend to React Hooks, React Router, and Next.js
- Collaborated with the product team to design and ship new features
- Rebuilt the marketing site
- Implemented frontend test coverage

- Worked in SCRUM: daily standups, sprint planning, retrospectives

Stack: React, Next.js, JavaScript, GitLab

beta.gouv.fr

Full Stack Engineer

February 2018 - March 2019 (1 year 2 months)

Paris

Freelance developer embedded in Avril (now France VAE), a startup incubated at Pôle Emploi's internal incubator ("La Fabrique"). Avril centralizes information and procedures around VAE (validation des acquis de l'expérience) for job seekers.

Worked in a lean team of 6 with fluid roles — built the MVP from scratch, then iterated with analytics-driven product management.

- Built the MVP from scratch in Elixir/Phoenix, then shipped features iteratively
- Integrated Algolia for search and Mailjet for transactional emails connected to Pôle Emploi services
- Fully remote with monthly in-person syncs in Paris

Stack: Elixir, Phoenix, PostgreSQL, Algolia

Figaro Classifieds

Full Stack Engineer

February 2016 - August 2018 (2 years 7 months)

Paris

Long-term freelance engagement building and maintaining recruitment solutions for Figaro Classifieds — questionnaire tools and application management systems, built from scratch.

Also took on a DevOps role during a major infrastructure migration.

Stack: React, AngularJS, JavaScript

Alteca

Software Engineer

March 2014 - December 2015 (1 year 10 months)

Lyon

First role out of engineering school. Worked across multiple client projects in the JVM ecosystem with JavaScript frontends.

Stack: Java, JavaScript, AngularJS

Education

Polytech Lyon

Diplôme d'ingénieur (M.Sc. in Engineering), Computer Science · (2011 - 2014)

IUT Lyon 1

DUT (2-year Undergraduate Degree), Computer Science · (2009 - 2011)
